April 2017

2nd Mega Watt Conference

On Wednesday 12th April, we welcomed a host of biomass installers from the length and breadth of the UK to our second Mega Watt Partner Conference, held at Latimer Place, Bucks.

As well as introducing Eurobiomass, our Mega Watt partner to the UK market, we also hosted some key Industry Speakers which included regulatory experts from the Environment Agency, Forest Fuels & AMP.

Our speaker from the EA discussed the current regulations surrounding both WID and non WID waste wood and the relevant permits needed. The future of waste wood as a fuel was also discussed in detail.

Eurobiomass presented existing UK biomass installations and detailed how their boilers are designed around the fuels. They are also able to control their boilers remotely which enables manufacturer led problem solving which reduces the need for engineer call-outs.

To find out more about the range of Mega Watt boilers now available in the UK market, please contact BGI directly.

Latimer Place, Bucks

Mega Watt Biomass Boiler

“We had a full house for our 2nd 1MW—15MW Partner Conference, held earlier this month and welcomed a variety of key speakers from the industry to share their knowledge. We will be running another date in the early Autumn so watch this space!”

- Meet the new Office Team at BGI
- BGI Partner Training Days
- SFR Update on Waste Materials
- All biomass boilers are to be rated

Meet the New Office Team at BGI

As part of our recruitment drive for 2017 with the aim of expanding our back office and providing more support to the business, we are now pleased to introduce two new members to the BGI team.

Vanessa Longbottom (pictured right) has joined BGI as Executive PA & Office Manager and will be leading the implementation of 9001 to support the development of the company through developing a strong infrastructure platform for the business.

Helen West (pictured left) is our new Project Co-ordinator who you will no doubt speak to over the phone when contacting the BGI office. She will also be co-ordinating all aspects of our Partner Training Days.

They are both here to facilitate the expansion of the business and we are happy to welcome them to BGI.

BGI Partner Training Days

A lot has changed within the industry since we started to undertake training with some of our early installers. Through our extensive research and development of low cost fuels such as **Waste Wood, MDF Dust, and Non Woody Biomass, and Waste To Fuel Conversion**, we can now enable our installation partners to approach a whole new range of industries.

Our Waste Wood boilers offer an environmentally sound solution to a costly Waste Wood problem.

Our Biokompakt Austrian made specialist wood boilers can burn waste wood as a fuel within BEIS approved emissions limits (certified).

As well as in-depth learning about our full range of boilers which now include a range up to 15MW, you will also learn about locally sourced alternative biomass fuels that can operate outside of the RHI. During the day, we will cover the regulations surrounding burning WID and non WID waste wood and its future as a fuel.

If you would like to become a BGI Partner and join our expanding network of Installers, we run monthly training courses at our newly built Training Centre in Asheridge, Bucks.

The next available dates are **Tuesday 9th May** and **Tuesday 13th June 2017**. To register a place, please contact our offices directly on **01494 757055** or email info@b-g-i.co.uk

The Latest from the Sustainable Fuel Register on Waste Materials

The SFR is an industry led register of non wood based fuels and provides participants with a simple way of meeting sustainability criteria.

We recently asked the SFR to clarify which waste materials would need EA approval, and this was the response.

“Our understanding is that all non-hazardous wastes potentially require part B permits. The exception, however, is for own wastes that are used in a sub 400kW system which could be dealt with under a U4 exemption. For example, horse manure would fit into this as long as the waste is produced and used on the same site.

Some wastes might be converted into products, for instance waste coffee grounds (WCG) being pelletized. In our view, these products would not require a part B permit, however WCG that are not processed into another form but burnt directly, would require a permit.”

To find out more about the SFR, visit www.sfregister.org
