POWERING THESE

“Our work within the Waste Wood sector is revolutionising the way in which waste products are now viewed and utilized as a source of cost effective, green energy.”

*- Matthew Hunt,
Managing Director, BGI Ltd.*

In This Issue

- Waste Wood Solution
- New to the UK - Fast Growing Biomass Tree
- Installer Training
- RHI Degression Update
- BGI Approved Installer wins Industry Award

Become a BGI Accredited Installer

BGI are the UK's exclusive distributor of the Kostrzewa range of Biomass Boilers—truly affordable boilers utilizing low cost, sustainable fuels. These boilers are Class 5 Rated and the 48 boilers in the range start at 10Kw and range up to 285kW.

BGI Accredited Installers are fully trained in assessing, installing and maintaining these latest innovative biomass boilers.

By Joining the BGI Partner Programme, all installers undertake a full day of training held at the BGI HQ in Bucks. The day comprises both classroom style learning and practical installation training in our Showroom.

As well as in-depth learning about the Kostrzewa range, you will also learn about boilers and fuels that can operate outside of the RHI. BGI are planning for life after RHI with all its rules and regulations on fuel types. Here, we will share with you our research on locally sourced, alternative biomass fuels.

As a fully accredited BGI Partner, you will benefit from:

- ◆ £100 back when placing your first boiler order
- ◆ Access to BGI's extensive infrastructure and network
- ◆ BGI guaranteed and certified products
- ◆ Full training on all products and full marketing support

To secure your place on one of our forthcoming courses or to find out more, please call us on **01494 757055**.

BGI Approved Installer wins Industry Award

This month, congratulations go out to our approved installer, Lachlan McInnes of **McInnes Plumbing & Heating** for winning the **Business Development Award** category at the recent Green Energy Awards. Well done from all at BGI!

New to the UK: Fastest Growing Biomass Tree

We are preparing to plant a new type of tree, never before grown in the UK for biomass. Our Paulownia seedlings have grown sufficiently (as shown in the photo below) and will be planted in our test beds shortly. They are short rotation crops and are the fastest growing biomass trees which are perfect for energy plantation enterprises.

In viable regions, this is the answer to harvesting much heavier biomass weight per acre than willows, poplar or aspen. The species is not overly selective of soil types and is highly effective at restoring polluted soils to a healthy state.

Other than climate limitations, wetland with high water table, or high elevations are the only known bioenergy plantation locations that Paulownias do not thrive. We will keep you updated with the progress of this crop as it develops on our land.

Paulownia—Fast Growing Biomass

Following DECC's recent quarterly tariff announcement, there will be a 15% reduction to the biomethane for injection tariff, a 15% reduction to the small, medium and large biogas tariffs and a 10% reduction to the small commercial biomass tariff, effective from 1 July 2016.

Medium biomass however will not be affected which is great news for Waste To Energy projects within the Waste Wood sector.
