Life Outside of the RHI

With the news of the abrupt end to the Renewable Heat Incentive funding in Northern Ireland there is much speculation about the future of the scheme in general.

BGI have been preparing for this shift and investing in biomass boilers that can operate outside of the RHI with significant savings being made on affordable biomass solutions and low cost fuels.

There are many restrictions on fuels currently within the RHI scheme hence by choosing a boiler that operates outside of the scheme you are not tied to the same supply chain as you would have been with oil or lpg.

Average Fuel Prices—RHI

- ◆ Wood pellets—£260 per tonne
- ◆ Wood chip—£150 per tonne

Fuels must be sourced from a supplier on the Biomass Suppliers List

Average Fuel Prices—Non RHI

- ◆ Wood Pellets—£150 per tonne
- ◆ Wood Chip—£75 per tonne

Plus a whole host of alternative fuels, grains, waste wood, grasses, manure, coffee grounds etc

“With the sudden end to the RHI Scheme in Northern Ireland, we are already investing in biomass technologies that can operate effectively outside of the scheme and offer significant savings to both home owners and businesses.”

- Matthew Hunt, Managing Director, BGI Ltd.

Cost Implications of RHI Installations

To apply for RHI you need an Energy Performance Certificate (average £150), Green Deal Advice Report (average £150) and annual fuel reporting is now compulsory. Domestic RHI also requires the removal of the existing boiler.

- ◆ Average cost installed (based on 4 bedroom house) —£25,000
- ◆ Average cost installed (district heating 5 properties) —£68,000

Non RHI Installations

None of the above restrictions apply and you are allowed to keep your existing boiler as back up.

- ◆ Average cost installed (based on 4 bedroom house) —£12,000
- ◆ Average cost installed (district heating 5 properties) —£33,000

In This Issue

- Life outside of the RHI
- Become a BGI Accredited Installer
- Financed Boiler Options
- New to the market— 35kW Burner

Become a BGI Accredited Installer

BGI are the UK's exclusive distributor of the Kostrzewa range of Biomass Boilers—truly affordable boilers utilizing low cost, sustainable fuels. These boilers are Class 5 Rated and the 48 boilers in the range start at 10Kw and range up to 285kW.

BGI Accredited Installers are fully trained in assessing, installing and maintaining these latest innovative biomass boilers.

By Joining the BGI Partner Programme, all installers undertake a full day of training held at the BGI HQ in Bucks. The day comprises both classroom style learning and practical installation training in our Showroom.

As well as in-depth learning about the Kostrzewa range, you will also learn about boilers and fuels that can operate outside of the RHI. BGI are planning for life after RHI with all its rules and regulations on fuel types. Here, we will share with you our research on locally sourced, alternative biomass fuels.

Practical training in the BGI Installer Training Showroom

As a fully accredited BGI Partner, you will benefit from:

- ◆ £100 back when placing your first boiler order
- ◆ Access to BGI's extensive infrastructure and network
- ◆ BGI guaranteed and certified products
- ◆ Full training on all products and full marketing support

Our next Training Courses are running on Tuesday 22nd and Wednesday 23rd March 2016.

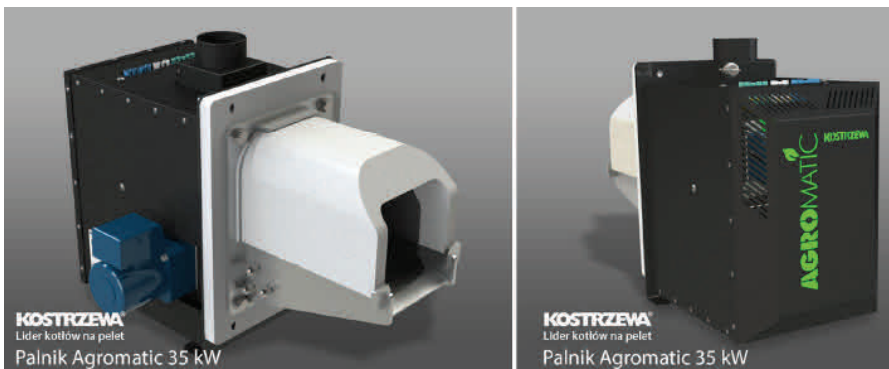

To secure your place on one of our courses or to find out more, please call us on 01494 757055.

Finance Options

We have partnered up with Portman Asset Finance who are a market leading asset finance lender and broker working with over 30 lending partners. They can offer a range of finance options on boilers including leasing, HP and Commercial Loans. They offer terms of up to 7 years with no deposit and rates from 4%. A representative will be attending our March Installer Training Courses to outline in more detail, the options available.

New to the Market—Agromatic 35kW Burner

We are pleased to introduce to our range a new burner which can be installed in the majority of our boilers to enable the burning of pelletized biomass with up to 5% ash content (sawdust pellets of A1, A2, B class, industrial and even agro pellets made of straw, sunflower and other biomass).

Until now, the burning of these fuels was only possible in industrial power plants so this is a major breakthrough and this product is unique in the market.
