## Food Waste To Energy

BGI is addressing the problem of organic and food waste for customers. If you have **food waste, sewerage sludge, unseparated or contaminated organic waste, meat or animal by-products**, we can help!

If you create more than 1 tonne of food waste per week, and would like to turn that into a source of income, or at the very least, reduce your costs, we can help, with our **Food Waste To Energy** system.

Digester

A typical 1100L bin of mixed organic materials will typically cost £85/100 to deal with, every time it is emptied and taken away. We can help eliminate most, or all of these costs and turn your waste product into a fuel.

- Waste is fully reduced or turned into fuel in under 24 hours
- We use proprietary blend of special bacteria to undertake the conversion
- It all happens on-site, with no disruption to your business
- The entire process is extremely user-friendly
- The process is very cost effective, with rapid payback

To find out more about our Food Waste to Energy system, please contact us directly on **01494 757055**.

*“We’re thrilled with the outcome of our recent willow harvest and the re-growth we have noticed in only 3 weeks since, has exceeded our expectations —a truly robust biomass crop!”*

**- Matthew Hunt,  
Managing Director, BGI Ltd.**

### Food waste to energy in 24 hours...

## Brexit Poses a Significant Risk to the UK Renewables Industry

To date, we have simply not heard the environment mentioned in the EU debate, although it is not the only subject that has been starved of information, facts and reasoned argument. Part of the reason for this may be the anti-climate change views of the politicians leading the Brexit case but they are not the only ones who have a case to answer.

The current government have slashed support for renewables, watered down 2030 EU agreements and are nearing the bottom of the league table for our 2020 renewables targets. If Cameron, Osborne and Rudd are all campaigning to remain, we need to know how they plan to address these serious policy failures if we are going to play any part in any successful EU plan to reduce emissions. However, those wishing to leave have even more serious questions to answer. The REA recently polled its members and the majority felt that the UK would be less likely to meet our climate targets, renewable deployment would decrease and it was felt their businesses would risk contraction if we were to leave the EU.

To read this article in full, written by Dr Nina Skorupska, Chief Executive of the REA, please [click here](#)

## Become a BGI Accredited Installer

BGI are the UK's exclusive distributor of the Kostrzewa range of Biomass Boilers—truly affordable boilers utilizing low cost, sustainable fuels. These boilers are Class 5 Rated and the 48 boilers in the range start at 10Kw and range up to 285kW.

BGI Accredited Installers are fully trained in assessing, installing and maintaining these latest innovative biomass boilers.

By Joining the BGI Partner Programme, all installers undertake a full day of training held at the BGI HQ in Bucks. The day comprises both classroom style learning and practical installation training in our Showroom.

As well as in-depth learning about the Kostrzewa range, you will also learn about boilers and fuels that can operate outside of the RHI. BGI are planning for life after RHI with all its rules and regulations on fuel types. Here, we will share with you our research on locally sourced, alternative biomass fuels.

Practical training in the BGI Installer Training Showroom

**As a fully accredited BGI Partner, you will benefit from:**

- ◆ £100 back when placing your first boiler order
- ◆ Access to BGI's extensive infrastructure and network
- ◆ BGI guaranteed and certified products
- ◆ Full training on all products and full marketing support

To secure your place on one of our forthcoming courses or to find out more,

please call us on 01494 757055

## Willow Re-growth at Hunters Oak Exceeds Expectations

Just three weeks after harvesting the willow at our biomass crop plantation, we have been astonished by the amount of re-growth experienced in this short space of time (shown in the photograph on the right).

We put this down to the very wet and mild weather we have been experiencing recently, since willow thrives in these particular conditions.

This particular crop will be ready to harvest again in another two to three years time.

## BGI have partnered with AMP Plc to provide our Installers & End Users with Clean, Sustainable Heat from Biomass Esco's.

AMP develops, finances and installs biomass boiler systems for a wide range of applications including schools, Care Homes, Hotels, Leisure Facilities and Business Parks. BGI and AMP are now working together to provide fully financed, versatile, Biomass Boiler solutions:

AMP's experts will review the specific site and energy requirements, assessing the financial case for biomass and recommending the most appropriate biomass system. They will deal with any planning consent that may be required and will offer finance options to facilitate immediate savings from the installation. Biomass systems are fully maintained by AMP for the duration of the contract.

The two main types of boilers installed are **Wood Chip** and **Wood Pellet**. Remote monitoring of fuel levels enables regular replenishment of fuel stores utilizing a range of fuel supply contracts including options that provide long term pricing stability.

To find out more, please call BGI directly on 01494 757055.
